NOTES:
 1 This matrix is used to compare the most prominent issues for initial screening of the alternatives. Additional issues will be evaluated during later phases of the project.
 2 Community Cohesion considers the invasive and safety effects to the established neighborhood network.
 3 To minimize impacts, most of the natural environment areas will be bridged. 'Direct' impacts are from the bridge piling and/or roadway fill material and 'indirect' impacts are the areas shaded under the bridge.
 4 Preliminary information - Not field verified.
 5 The higher the number, the better the service.
 6 Cost Estimates are based on average costs excluding business damages.
